Most recently, ACC reiterated their concerns in their comments on the transparency rule (see attached, in the appendix pages 30-32). In short, ACC contends:

- The IRIS assessment identifies risks at concentrations lower than background (or produced through breathing)
- The second SAB review was biased against consideration of industry data.
- The epidemiology data sets used in the assessment were not particularly robust

Can you say more about the basis of ACC's concern?

**Subject:** Backgrounder on EtO

Hi Jennifer and Richard,

Per our earlier discussion, attached is a one-pager on EtO. I wouldn't distribute this beyond you two, but hope it helps give you some background heading into any meetings.

Thanks,

Lou
